Barclays | Current-Quarter Investigation Signal

2026 Q2 | 36 exchanges: 31 equity and 5 fixed income | Generated 9 October 2026 | Evidence prioritisation, not a finding

ACTION SIGNAL 2 | SUPERVISORY ENQUIRY	Targeted clarification is warranted. Available transcript proxies do not establish a case for formal regulatory investigation.

Five-level action ladder: 1 No Action Required | 2 SUPERVISORY ENQUIRY [selected] | 3 Specialist Enquiry | 4 Regulatory Investigation | 5 Supervisory Intervention

Current-quarter metric strip

Metric	2026 Q2 equity	Historical z-score*
Equity exchanges	31	N/A
Deflection	22.6% (7/31)	+1.23
Figure coverage	94.7% (18/19)	+1.29
Q&A alignment	0.869	+0.83
Follow-up	19.4% (6/31)	-1.19
Analyst concern	-0.135	-1.86

* Historical z-scores calculated from prior Barclays equity-quarter means in supplied CSV. They are contextual indicators, not formal escalation thresholds. Fixed-income observations are excluded from this metric strip.

Why this signal?

Seven equity exchanges carry a deterministic deflection indicator, but answer alignment remains relatively high, figures are supplied in most figure-seeking exchanges, and analyst concern is generally low. A targeted enquiry can resolve unanswered numerical requests and response ambiguity without asserting that management evaded questions.

Bottom line | Supported: targeted communication and disclosure clarification. Not established: actual prudential weakness, wrongdoing, control failure or regulatory breach. Confidence: limited to transcript-derived proxies; original PDF source links have not been independently verified.

Supporting risk-domain scorecard

Domain	Signal	Direction	Exchanges	Current-quarter basis / caveat
Capital & Solvency	Monitor / L1	Unconfirmed	6	0 deflections; 1 follow-ups; mean alignment 0.88. Classification based on question content.
Liquidity & Funding	Monitor / L1	Unconfirmed	3	2 deflections; 0 follow-ups; mean alignment 0.89. Classification based on question content.
Credit & Counterparty	Monitor / L1	Unconfirmed	2	0 deflections; 0 follow-ups; mean alignment 0.89. Classification based on question content.
Market & Balance Sheet	Monitor / L1	Unconfirmed	7	1 deflections; 2 follow-ups; mean alignment 0.90. Classification based on question content.
Operational & Technology	Not assessed	N/A	0	No directly mapped current-quarter exchange; not evidence of stability.
Business Model & Strategy	Watch / L2	Unconfirmed	15	4 deflections; 2 follow-ups; mean alignment 0.88. Classification based on question content.

Domain	Signal	Direction	Exchanges	Current-quarter basis / caveat
Governance, Controls & Data	Not assessed	N/A	0	No directly mapped current-quarter exchange; not evidence of stability.
Regulatory & External	Not assessed	N/A	0	No directly mapped current-quarter exchange; not evidence of stability.

Alberto Artoni (Intesa Sanpaolo) | Costs and investment spend	Alignment 0.811; concern -0.414; figures 0; deflect False; follow-up True; LLM ok / high

Question (extract): A quick follow up, because the guidance for 2028 has not been changed, if I got it right. So, it means that you have more confidence. So, I mean, this type of [additional] investment that you plan to make, will increase your confidence in your ability to deliver the results. Is that the way to read this process?

Answer (extract): Yes, increased confidence. Look, thank you very much. We appreciate the time and the attention you've given. We look forward to meeting some of you on the road in the next few days. What I would say to sum up is when you look at these results [as] a whole, we're 10 [quarters] into the plan we announced in 2024, and two quarters into the plan we announced earlier this year. In every quarter, in every way, cumulatively and individually, we've been meeting our guidelines, sometimes a little more than others, but generally, it's been a part of progress in returns, a part of progress in distributions, a part of progress in efficiency in the bank and in our capabilities in the bank more broadly. We are a bigger part of the UK [TRUNCATED]

Interpretation: review response completeness and requested quantification against the full transcript; automated indicators are not determinations of evasion. Next step: request a precise reconciliation or clarification where warranted.

Analyst / topic	**Signals / assessment**
Sachin Nayar (Goldman Sachs) | Guidance against consensus (broad)	Alignment 0.868; concern +0.174; figures 7; deflect True; follow-up False; LLM ok / routine

Question (extract): Morning Anna, Sachin Nayar from Goldman Sachs. First question, just on the BUK product margin. So I think there was around a £50 million headwind at Q1, primarily from the roll-off of five year [Covid] mortgages and then £61 million at Q2, so slightly higher than expected. You mentioned on the call a larger and more competitive ISA season and now you expect a neutral to positive impact for H2. So could you just elaborate

on some of the assumptions there? I think you mentioned in spite of competitive deposit pricing, there is an impact from cards seasonality and day count, could you maybe quantify those or even talk about the moving parts going forward through to even 2027 if possible? And then secondly, just on the USCB [TRUNCATED]

Answer (extract): Let me start and I refer to some of this in my prepared remarks, but me go back to it. So we guided at Q1 that we would expect the margin impact to be broadly similar in Q2 and it goes from like £52 [million] to £61 [million], so it's marginally worse. That number of £61 [million] is somewhat exaggerated by the fact that we grew the structural hedge in absolute terms, the notional at the back end of Q1. So what that means is we are moving income out of the product margin and into the structural hedge bucket. So those two numbers are inflated and somewhat exaggerate the effects. Now that's a couple of times we've called that out. Clearly, we've had a more stable structural hedge notional in Q2, so you're not going to see [TRUNCATED]

Pranjal Vaish (Credit Agricole) | RWAs and the Investment Bank	Alignment 0.882; concern +0.077; figures 0; deflect False; follow-up False; LLM nan / nan

Question (extract): I saw that your LCR declined from 170% to around 158% at the end of this quarter. compared to the end of last year. Can you please walk us through the key drivers behind this decline, perhaps if you're anticipating any material outflows in the near term? And also if you can share your target operating range for the LCR, if you share that? And the second question would be on the SRTs. I noticed that you had around £700 million benefit this quarter. If you can provide any forward guidance on your SRT pipeline, specifically how much RWA reduction or in terms of CET1 benefit you plan to achieve through SRTs in the coming months or in FY26?

Answer (extract): The LCR has declined over the past 12 months or so. This firstly relates to something that we called out probably 12 months ago now, which was a change of methodology within our prime financing business, which moved to a more conservative approach. We report the LCR on a 12-month rolling basis. So that has just taken time to come through the ratio. That was the mechanical effects that we disclosed 12 months ago. And obviously, it's been quite an active quarter in terms of Investment Bank activity and financing, in particular. So we've obviously leaned into that and use some of our funding to support those clients but I wouldn't call anything else out, particularly in terms of where the LCR ratio will go from here. On SRT [TRUNCATED]

Jonathan Pierce (Jefferies) | Guidance against consensus (broad)	Alignment 0.875; concern +0.043; figures 9; deflect True; follow-up False; LLM ok / routine

Question (extract): Hello, good morning. I've got two questions please. The first is really just a clarification of some of the answers you've given in the last 30 minutes on both Net Interest Income and costs. On the NII, it sounded like, from what you were saying Anna, as though USCB forecasts for 2028 have maybe got to circa the right place, but UKCB is still a bit low. I know you don't want to be marking-to-market every quarter, but it would be helpful just to get a sense as to whether I've read between the lines correctly there. And then on the cost: income ratio, again totally understand you don't want to be bound to an absolute cost number next year, but consensus is at 55.5% on the cost: income ratio. That feels a meaningful step do [TRUNCATED]

Answer (extract): So Jonathan, let me take your first clarification points. So, I'll just repeat what I said. I'm not going to mark-to-market. Clearly, the analyst community has listened, and we've seen a movement in that consensus for 2028. We have confidence in all of our businesses, and we have confidence in the UK Corporate Bank, as well as the US Consumer Bank. So, we've seen both of them move up. In terms of cost: income ratio, look, it's high 50s this year. Our expectation low 50s in 2028. We haven't given you any guidance at all for 2027, but what we are saying is that given that we are committed to progressive returns year-on-year and progressive distributions, you should expect us to be making a meaningful step between the high [TRUNCATED]

Analyst / topic	Signals / assessment
Amit Goel (Mediobanca) | Clarification, no subject	Alignment 0.687; concern -0.122; figures 0; deflect False; follow-up True; LLM ok / routine

Question (extract): So if we just assume a similar level of profitability to what it has been doing, so we can then work out the non-NII [amount]?

Answer (extract): So I would expect that the Best Egg income as broadly as we took it on, subject to the point that I made, which is that the securitised margins are a little bit compressed by the fact that the reference rates in the industry are a bit elevated at the moment. And clearly we have some optionality to deal with that over time. So, we could retain more on our balance sheet if we chose to, or at a point in time we will be taking control of that securitisation process within our own Markets business. That will give us a bit more control over the economics also.

Andrew Coombs (Citi) | Guidance against consensus (broad)	Alignment 0.908; concern -0.170; figures 2; deflect True; follow-up True; LLM ok / routine

Question (extract): Good morning. One follow-up on the structural cost actions, and then a fresh question on the Investment Bank please. On the structural cost actions you've talked about a commensurate improvement in 2027 efficiency. So, is it fair to assume that these investments are more focused on the cost side, as opposed to revenue growth ambitions. And linked to that in your prepared remarks, you talked about the SCA in the UK, you talked about a higher cost: income [ratio] in PBWM. So is it fair to assume that's where the bulk of these structural cost actions are being deployed, is it in the UK businesses? And then my separate question on the Investment Bank. Obviously a very strong quarter for Advisory, for ECM, for Equities. It's [TRUNCATED]

Answer (extract): Okay, Andy, I'll take the first one and then Venkat will take the second. I mean, structural cost actions are focused on the cost base of the firm and improving the efficiency and the effectiveness and the cost: income ratio of the firm. I'd encourage you to think of structural cost actions as one of the investment options that we have. We're clearly investing in driving the revenue and we take the same approach here. We have the same degree of focus on the ROI here, but you're correct, in that it will be focused on driving the gross efficiencies, i.e. it's entirely cost related. But it is one of many actions that we take in respect of investment and we think of it no differently. I wouldn't think of it as particularly s [TRUNCATED]

09 | f3f29bd0739c-x011 | Capital & Solvency	Priority flags 1 | equity | transcript page 13
Analyst / topic	**Signals / assessment**
Philip Richards (Bloomberg Intelligence) | RWAs and the Investment Bank	Alignment 0.882; concern +0.337; figures 3; deflect False; follow-up False; LLM failed / llm_failure

Question (extract): First of all, with the Investment Bank share of risk weighted assets at the Group level seems to be quite stubbornly stuck at the around 55% level. Is that making the 2028 target more difficult to get to, or is it just because the quarter is so strong in Investment Banking and you are taking advantage of that? What's going on there [to get to] at least to circa 50% [RWAs]? And then secondly, actually the equity trading. 45% growth would be seen in any normal period as a very, very strong performance. But when the US peers are doing about 70% growth, by definition therefore you have lost share versus them. So how has that been looked at internally? Is it seen as a blowout, very strong quarter or are you seeing it as losin [TRUNCATED]

Answer (extract): Okay, so on the RWAs, we lent in a little bit in the quarter in RWAs in the Investment Bank. It's up about 1% quarter on quarter, about 40% of the growth year on year was FX, so you can ignore that. I'll come back to this a bit more fully when I talk about Equities, but our objective here is to maintain the discipline around [RWAs], and if we do deploy a little bit more, then we're looking for revenue. So you can see revenue over RWAs has gone up to 7.7%, that's a hundred basis points up year on year. So this capital efficiency is really what we are driving. The second, so let put a different perspective to this, clearly we continue to grow the rest of the bank. Notably in that percentage is the deployment of the advance [TRUNCATED]

Analyst / topic	**Signals / assessment**
Benjamin Toms (RBC) | Mortgages, lending and UK rates	Alignment 0.901; concern +0.146; figures 1; deflect False; follow-up False; LLM failed / llm_failure

Question (extract): Good morning both. Thank you for taking my question. The first one's on PBWM. Net New AUM in PBWM in Q2 was relatively weak. What's impacting performance here? I think I was a little surprised, my feeling was you've been quite active in trying to make your proposition more attractive in this space. And then secondly on BUK, you spoke in previous quarters about your strong mortgage pipeline. Have high swap rates and the news flow around the changes to stamp duty, albeit potentially changed overnight, have they had much of an impact on your mortgage pipeline as we stand today? Thank you.

Answer (extract): Thanks, Ben. I mean, there's nothing I would particularly call out on PBWM. I can hand to Venkat for what we've been doing there, but in absolute terms, these are not very large numbers, and therefore, they can be a bit lumpy. Clearly, we have ambition for this business for it to be much bigger, so you can get some lumpiness quarter to quarter. As we look over the first half in totality, it looks completely fine and actually broadly similar to the previous year. Let me just deal with mortgages, and then I'll hand to Venkat on PBWM more generally. What we've seen is a strong quarter in Mortgages. As I mentioned before, we've seen somewhat of a recovery in application margins in Q2 after the compression that we experienced [TRUNCATED]

B | Attention, concern and follow-up

Separate analyst attention from residual supervisory concern

Attention indicator	Current quarter interpretation
High attention	Most discussed topic: Guidance against consensus (broad) (11 exchanges). Frequency is not risk severity.
Low attention / elevated concern	Review individually flagged exchanges with higher concern or poor alignment, even when topic count is small.
High attention / low concern	Repeated guidance and business mix questions can be routine; test specific unanswered requests rather than assuming deterioration.

Attention-versus-concern matrix (qualitative)

	Lower concern	Moderate / elevated concern
Higher attention	Frequently discussed guidance; assess whether management gave consistent quantitative answers.	Review clustered deflection and missing-figure requests.
Lower attention	Routine one-off clarifications.	Review isolated low-alignment or high-concern exchanges even without topic recurrence.

Follow-up request register

Priority	Request	Recipient
1	Reconcile any unanswered numeric guidance, requested ranges and response figures for ranked exchanges.	Barclays investor relations / finance
2	Validate transcript pages, complete Q&A and contextual speaker turns for each top-ranked exchange.	Internal evidence reviewer
3	Check whether narrative claims align with published regulatory and financial disclosures before considering escalation.	Supervisor / financial specialist

C | Majority decision report

2026 Q2 | Adopted action: Level 2, Supervisory Enquiry

C1. Decision outcome

A targeted supervisory enquiry is supported, primarily to clarify business strategy, earnings guidance and numerical disclosure responses. This is a review-priority judgment, not a prudential finding.

C2. Analytical philosophy and scope

The unit of analysis is an analyst-management Q&A exchange. Source coverage comprises 31 equity and 5 fixed-income Barclays exchanges in 2026 Q2. The methods measure sentiment, semantic alignment, figures, follow-up and linguistic markers, not latent management intent.

C3. Current-quarter evidence and historical context

Equity deflection 22.6%, figure coverage 94.7%, alignment 0.869, follow-up 19.4% and concern -0.135. Prior-quarter z-scores are context only; cross-quarter changes do not prove worsening risk.

C4. Domain classification and aggregation

Each exchange is assigned to one dominant risk transmission domain using topic plus question text. Domain counts represent exchanges, not independent corroboration or verified exposures. Domains without directly mapped evidence are unassessed, not presumed stable.

C5. Signal fusion, criteria and weighting

Qualitative precedence is given to directly observable missing numerical responses, repeated deflection indicators, low semantic alignment and follow-up, balanced against supplied figures, strong alignment and low concern. No numerical action-level weights or validated cut-offs were provided. LLM review flags are supplementary, with failures excluded from substantive conclusions.

C6. Why this level, not lower

Several current-quarter exchanges merit specific clarification, and seven equity exchanges contain a deflection marker. A pure no-action decision would leave reviewable unanswered questions untested.

C7. Why not a higher level

There is no verified evidence here of material financial deterioration, serious control failure or non-compliance. Stronger alignment and figure coverage also counterbalance the flags. Independent primary-source corroboration would be required before specialist or formal investigation.

C8. Methods, sense checks and limitations

Exchange IDs were joined across supplied CSVs; the period, bank, audience, denominators and top-ten limit were checked programmatically. Historical z-scores use earlier equity-quarter means. No external transcript PDFs were verified, and topic mapping remains interpretive. These are communication proxies with possible false positives.

C9. Reproducible conclusion

Level 2 is a bounded request for evidence. The top ten exchange IDs and source pages are recorded in Section B; review should begin with full-context transcripts and specific numeric reconciliations.

D | Minority / challenge report

Alternative action signal: Level 1, No Action Required

D1. Minority position

A reasonable dissenting interpretation is that the quarter merits routine monitoring rather than formal supervisory enquiry.

D2. Strongest contrary evidence

Equity answer alignment averages 0.869; 18 of 19 figure-seeking exchanges received at least one detected figure. Follow-ups appear in only 6 of 31 equity exchanges, while average analyst concern is negative.

D3. Alternative explanation

A deflection phrase can occur in a substantive response. A requested number can be addressed through surrounding context, another speaker, or another section of the call. Topic repetition may reflect ordinary analyst interest.

D4. Challenge to majority logic

The majority uses a qualitative supervisory enquiry threshold, not a calibrated empirical cut-off. Some LLM evaluations failed, and the ranking combines non-independent proxies. Without the original source documents, the precise degree of unanswered disclosure cannot be independently confirmed.

D5. What would resolve disagreement

Read complete top-ranked exchanges and their surrounding pages; distinguish actual non-response from response elsewhere; reconcile management figures to published disclosures. Escalate only when independently confirmed material gaps remain.

D6. Minority conclusion

Retain Level 1 as the defensible alternative. The majority Level 2 remains proportionate only if treated as a narrow information request rather than an allegation.

Source and hyperlink qualification

The supplied exchanges CSV identifies a document hash and question page but does not contain original PDF filenames or per-file URLs. The shared Google Drive folder is a collection link, not a verified file-specific source. Therefore no misleading PDF deep links have been manufactured.
